

I feel safe, secure and loved by family & society today!

Danushree

Danushree has improved and developed a lot today. She is more independent like a common child today! She is able to walk towards her mother and father for love and affection. She feels happy to play with children who are nearby. Danushree is more confident today to stand by herself and stretch hands to play articles. She is loved by everyone in the family and surrounding.

Danushree was born in 10/10/2017 in a very poor economic family with global delay development complications, parents of Danushree cursed by people who are neighbors to their family because of her physical status as global. But parents never feel she is a burden to them for future challenges. Parents never feel that disgust about the child & God blessed this kind of child in their family. They started to take the child for treatments, and took out a loan for treatment but the child remains uncured. One fine day parents came to know about Ashadeepa organization and available services they are giving for developmental delays, and ran towards Ashadeepa organization for enrolling the child for services. Early intervention & early education staff have started their interventions to make children develop by certain challenges for child development. After a year gradually the child has improved to hold head stable, stand firmly, and walk steadily and confidently. Which brings a smile on parents face and people are gone admiring about the development that Ashadeepa ensured in Danushree's life by short span of time and duration.

Complications the Child Faced & Child Become Normal after Intervention:

- Motor Domain: child poor head control unable to sit and stand, poor sight, not responding sound.
- Strength: Unable to hold things
- Communication: Makes simple sounds
- Social Behavior: Unable to respond to simple commands.
- Self-care: Chews swallow food
- Seeing: Unable to focus on objects
- Poor attention
